

SERVO DRIVEN PLATFORM ROTARY LABELLER

“HIGH PERFORMANCE WITH ULTIMATE VERSATILITY”

Easily programmable servo driven platforms to accommodate the widest range of label and product combinations, including optical and mechanical orientation

- Platforms are AC Servo driven giving infinite movement to handle a huge range of label product combinations
- A competent operator can program platforms a technician is not required
- A selection of PLC's and touch screens are available with recallable library for product set points – Mitsubishi / Alan Bradley
- Mechanical adjustments are calibrated for easy set up
- Optical orientation takes place within the main turret
- A range of options are available including integration of the Webmaster auto splicing and auto waste removal system.
- low maintenance and ease of service also sets this machine apart
- Designed and built in Australia
