

# PRODUCT SHEET

Product: **Webmaster Tape**

Category: **In-line / Rotary**

Impresstik's innovative splicing tape utilises a unique dual protective strip to cover the adhesive. Once the first protective strip is removed and attached to the label web the second protective strip remains covered ready for use allowing the label reels to be prepared and left until the end of the shift before being used without the adhesive going off. This also makes the splicing easier to handle.

Why not have your labels prepared with impresstiks splicing tape by your label supplier saving even more time

Impresstik's innovative splicing tape suitable for manual or any splicing requirement

- Reduces splice time being prepared and ready to apply
- Reduces label real change over time
- Makes for an effective splice even for less experienced operators
- No need to slow the machine down after a splice
- Can be used on high speed lines up to 500 bpm
- Splicing tape is available for purchase in boxes of ten rolls
